

Ray Gillespie

SURVIVOR

In February 2019, I noticed a large knot near my hip.

My diagnosis was Non Hodgkin's Lymphoma and I had 19 "hits" all over my body.

At one point, I was told I had three months to live. However, I was not ready for that.

I had 8 rounds of chemo then.....

I qualified for a Clinical Trial when I was over 70 years old.

Not doing the CAR T-cell Therapy was scarier to me than doing it.

Ray Gillespie

As of March 2021, I am officially celebrating one year of remission.

Today, I walk everyday and enjoy rides in my boat. My strength is significantly better.
